Assembly Instructions

1. Cut out Styrofoam the size of the base.

This increases stability and allows magnets to be attached at the bottom.

2. Glue the walls around the styrofoam. You can cut away the bottom flaps of the walls. Glue the roof if you do not need a removable roof.

For a removable roof:

1. Cut away the top flaps on the walls.
2. Stabilize the roof with Plastic Card.
3. Add Plastic Card supports to the sides so that the roof can be inserted. (see image)
